

Final Year Project

The Final Year Project (FYP) is a compulsory course in GMI training module and one which sets GMI trainees and graduates apart from the rest of the world. In groups, trainees put their skills and knowledge, and merge their individual strengths, into the projects to ensure that the projects meet industrial standards. Trainees work on the projects, with minimal yet sufficient supervision from the assigned supervisors, starting from the initial stages of proposal right till the construction and commissioning of the projects.

The exposure and experience trainees obtain from their 16-week in plant training become the thrust for them to work on the FYPs. These masterpieces become the pride of the trainees, and giving GMI the edge.
